

VLADYSLAV SOBAKAR

Python Engineer

+37062112974 · vladyslavsobakar@gmail.com · Vilnius, Lithuania

ABOUT ME

Python Engineer with hands-on experience building FastAPI microservices and LLM-powered automation at WinWin.travel, an online travel platform. Comfortable across the stack — from async backend services and Docker containers to SQL/BigQuery analytics and Tableau dashboards. Builds and ships personal AI projects (a Ukrainian voice assistant with offline speech recognition and an LLM brain) end to end. Background in teaching Python and a Game Development degree, bringing strong problem-solving and a builder's mindset to backend and AI-assistant engineering.

SKILLS

Backend & APIs: Python, FastAPI, Pydantic, REST APIs, Async / Await

AI & LLM: LLM tool / action orchestration (OpenAI, Groq), prompt-driven dispatch

DevOps & Tooling: Docker, Git, pytest, uv

Data & Analytics: SQL, BigQuery, Tableau, Advanced Excel

Web: HTML, CSS, JavaScript

WORK EXPERIENCE

Python Engineer

WinWin.travel | May 2026 – Present

- Develop and maintain Python FastAPI microservices behind an AI-powered travel assistant
- Implement LLM tool/action orchestration (OpenAI) to select and run the right action per user request
- Designed an async request flow (202 Accepted + background processing + backend callbacks)
- Maintain a shared action contract consumed by both Python and Java/Spring services
- Containerize services with Docker, manage dependencies with uv, and write tests with pytest

Python Instructor

GOITeams | October 2024 – June 2025

- Delivered structured Python instruction focused on data handling, logic, and problem-solving
- Explained programming concepts related to variables, control structures, and basic data processing
- Reviewed and corrected student code to improve accuracy, structure, and efficiency
- Assisted learners in debugging and understanding errors in their programs

EDUCATION

Vilnius Gediminas Technical University | 2024–2027

Multimedia Design

Relevant focus areas include data visualization, digital tools, and analytical thinking applied to media and projects.

Mykolas Romeris University | 2022–2024

Game Development and Digital Animation

Developed problem-solving skills, logical thinking, and technical foundations relevant to data and technology-focused roles.

PROJECTS

Lin — Ukrainian Voice Assistant (Python, personal project)

- Built a Windows desktop voice assistant from scratch in Python (~4,600 lines, 140+ voice commands)
- Offline Ukrainian speech recognition (Vosk) and neural text-to-speech (edge-tts); LLM brain via Groq / Llama
- Integrated Spotify, Gmail, Google/YouTube and weather; runs as a background tray service with a watchdog

Netflix Content Analysis Dashboard — Tableau

- Analyzed a Netflix content dataset and built interactive dashboards by type, country, and release year
- Presented insights through clear and structured visualizations
