SUMMARY

Python Engineer building production FastAPI microservices and LLM-powered automation for an online travel platform. Comfortable across the stack: async REST APIs, multi-provider LLM integration (GPT, Claude), Docker, SQL, and testing with pytest. Ships complete systems end to end and learns fast by building real, working software.

SKILLS

Languages: Python, SQL, JavaScript, C#

Backend & APIs: FastAPI, REST APIs, Pydantic, async / await, microservices

AI & LLM: OpenAI GPT, Anthropic Claude, Google Gemini, Groq, Ollama, prompt engineering, LLM integration

DevOps & Tools: Docker, Git, pytest, uv, CI/CD

Data: SQL, BigQuery, Tableau

Web: HTML, CSS, JavaScript

WORK EXPERIENCE

Python Engineer

WinWin.travel | May 2026 – Present

- Developed and configured an AI assistant for the company's booking platform, integrating three LLM providers (OpenAI GPT, Anthropic Claude, MiniMax) through FastAPI services
- Shipped async FastAPI microservices behind an AI travel assistant, enforcing data integrity with Pydantic and guarding against regressions with pytest
- Maintained a shared action contract consumed by both Python and Java/Spring services, keeping two stacks integrated with no breaking changes
- Containerized services with Docker and standardized dependencies with uv for reproducible builds

Python Instructor

GOITeams | October 2024 – June 2025

- Taught Python to ~40 students by reviewing and debugging their code, improving its correctness, structure, and efficiency
- Translated complex programming concepts into clear explanations for learners of varying levels

Freelance Web Developer

Self-employed | December 2024 – Present

- Built and shipped 3 responsive client websites (Wix, WordPress), including an automated booking system that replaced manual scheduling

PROJECTS

Lin — Ukrainian Voice Assistant (Python, personal project)

- Built a voice assistant in Python (~5,700 lines) that executes 140+ voice commands by integrating five external APIs (Groq, Google Gemini, Spotify, Gmail, Google Calendar) into one system
- Made the LLM layer provider-agnostic behind one OpenAI-compatible adapter, so switching between Groq, Gemini and a local Ollama model is a one-line config change
- Cut inbox noise 30x with a rules engine that classifies incoming mail into 9 categories and archives the 75% that is newsletters, so the assistant only speaks up for mail that matters
- Kept the assistant running unattended by adding a watchdog that detects crashes and auto-restarts components
- Ran fully offline speech recognition (Vosk) and neural text-to-speech (edge-tts) as the local fallback path

Netflix Content Analysis Dashboard — Tableau / BigQuery

- Analyzed a large content dataset in BigQuery and built interactive Tableau dashboards segmented by type, country, and release year

EDUCATION & COURSES

Multimedia Design — Vilnius Gediminas Technical University | 2024–2027 (currently enrolled)

Data Analyst — Mate Academy | 2025 (SQL, BigQuery, Tableau, EDA)

Game Development & Digital Animation — Mykolo Romerio Universitetas | 2022–2024
